SAPIENS

Final Draft for the movie

DISSOLVE TO:

INT. STUDY ROOM - DAY

We are seeing the outside world through the window. It's early morning and people are in hurry getting to their destinations. Buses are roaring and vehicles are speeding through the street. Everyone are busy.

The camera tilts down and we see two bikes approaching and being parked on side of the road.

Three individuals starts to approach the room we are seeing through which is on second floor. The camera follows the sound of there foot steps climbing the stairs and we see them in the passage and one of them opens the door.

CHARACTER 2

What's up buddy? Why did you call us this early in the morning?

To our surprise the camera turns to reveal a character sitting in the room behind us. He is CHARACTER 1. He was looking at his phone before. He looks up at character 2.

CHARACTER 1

What do you mean?

Character 1 stands up and the camera follows his motion.

Character 2 is followed by CHARACTER 3 and CHARACTER 4.

CHARACTER 4

Dude you called us early in the morning saying that there something wrong with the presentation.

Character 1 remembers that now, as he was indulged in his phone.

CHARACTER 1

Oh yes. There is definitely something wrong with our presentation.

CHARACTER 2

Well which part?

Character 1 scrolls the screen.

CHARACTER 1

The entire part.

Everyone are shocked at this statement.

CHARACTER 2

What are you talking about? Let me see.

Character 2 snatches the phone and starts looking at each slides.

CHARACTER 3

That's not possible. I spent an entire day to make this presentation more presentable, more attractive and now you are calling it a waste.

CHARACTER 1

I am not talking about the designs or even the style of presentation. That's good. I was talking about the information we put in there.

CHARACTER 4

You mean the research data we collected.

CHARACTER 1

Yes, I felt something was missing. Some kind of important information.

Character 2 finished looking at the screen. He puts down the gadget on the table.

CHARACTER 2

That doesn't make any sense. We spent an entire week reading the textbooks and omitted every information into the presentation as much as we could.

Character 3 looks at character 2 unbelievably.

CHARACTER 3

What do you mean by we?

CHARACTER 2

We as a group. We did the work.

CHARACTER 3

Actually I did most of the work. I read the entire book, created the presentation and spent my money which by the way you all need to chip in. Where were you when we were doing the work?

CHARACTER 2

Right beside you helping you with things.

CHARACTER 3

No you were not beside me. You were beside that shop hanging out smoking and eating.

CHARACTER 2

Comon I helped you in some way.

CHARACTER 3

Character 2 the only time you helped was when we asked you to stop bothering us when we were working. Thanks for that.

CHARACTER 2

Okay, what do you want me to say? I was kind of useless in this group, you did all the work are you happy now?

CHARACTER 1

Okay everyone sit. Let's address the real problem here.

Everyone grabs a nearby chair and sits down.

CHARACTER 1 (CONT'D)

Okay Character 4 give me some outline to this presentation?

CHARACTER 4

Wait, are you making fun of me?

CHARACTER 1

What...what does that mean?

CHARACTER 4

Okay I admit I did not practice my part in giving presentation. I will go home and prepare. You didn't have to call everybody and make fun of me.

CHARACTER 1

That's not the issue here. Okay I will make it simple for you. Atleast you should know what we are going to do in class two days later?

CHARACTER 4

Give our presentation.

CHARACTER 1

Ya about what?

CHARACTER 4

About whatever we did this entire week. I mean you can see it in your phone.

CHARACTER 3

We were giving presentation on the evolution of humans. Now Character 1 make your point.

CHARACTER 1

Yes. We were going to give some theoretical data, a basic life study of humans. From their birth to current situation.

(Lifting up the phone)

Yet all I see in this presentation is some basic and boring shit.

CHARACTER 3

That's not possible. We have given a lot interesting stuff and facts in there.

CHARACTER 1

Facts like we were apes before we became fully fledged thinking humans and fire was our first discovery to the whole human revolution. Even a 5th grader knows that.

(looking at Character 4)

Tell me how did our universe came into origin?

CHARACTER 4

Something happened like bang-bang or something....

CHARACTER 1

No it's big-bang. When you go home I request you to atleast glance at the presentation.

CHARACTER 2

Look we presented what the textbook said us to do. What else do you want?

CHARACTER 1

That's the problem right there, we are sticking to the text books definition. Let's think outside the box. There are so many interesting things we can talk about other than this text book defined theories.

CHARACTER 2

Okay Character 1 be straight forward. What's your point? What do you want us to do?

CHARACTER 1

Let's start over.

CHARACTER 2

What?

Everyone gives a concerned look except Character 4.

CHARACTER 1

Let's start from the beginning and make our presentation something unique.

CHARACTER 2

Wait hold on a minute.

CHARACTER 3

We have already spent a week doing this work and now you want to start all over again and not only that we have two days deadline, you know that right.

CHARACTER 1

Yes but we need only one day to make this happen.

(MORE)

## CHARACTER 1 (CONT'D)

I mean think, you might have read some interesting facts somewhere on internet, watched in a movie, read in books, novels, magazines or heard in podcasts, radio. You know any facts is valuable to this project.

## CHARACTER 2

You totally have lost your mind. This is our future we are talking about, our marks and resume depends on this final project.

## CHARACTER 3

He is right which is very rare for me to say. I don't think we want to mess up in the end. Atleast you should have mentioned this earlier.

## CHARACTER 1

I know its a mistake from my side but atleast lets give it a try. We will keep the original work as it is and we will spend today coming up with more interesting one.

## CHARACTER 3

You mean making a back-up project?

## CHARACTER 1

Yes, that way we still have the first one if we fail to complete this.

## CHARACTER 2

You are just wasting your time now. We did our presentation and we need to be practicing how to deliver infront of the professors, so lets cut this bullshit and focus on our main goal here okay.

## CHARACTER 4

I am with Character 1 here.

## CHARACTER 2

Oh boy here we go.

## CHARACTER 4

I mean there is no harm coming up with second plan and I have nothing else to do today so I am ready to give it a try.

CHARACTER 2

You don't even know what is the topic and you want to start again.

CHARACTER 3

How about this. We will sit for first 15 minutes and if it gets boring we will leave.

CHARACTER 1

That's a deal.

CHARACTER 2

Not you too.

CHARACTER 1

So what we will do now is start with some simple ideas. Say it, even if it is stupid and unremarkable. As I am the one who came up with this plan I will start.

Character 2 stands up.

CHARACTER 2

I would have left by now. Because Character 3 agreed to do this shit and as also my fate turns out that I came with him on his bike that means I have to wait along with him. So until this little conference ends I will be in that corner taking a nap, not disturbing your discussions that goes nowhere.

CHARACTER 4

Comon man don't be so grumpy. Just enjoy the moment.

By now Character 2 is on the little couch, cap over his face not responding.

CHARACTER 1

Let him be. He will come around soon.

CHARACTER 3

You told you were going to entertain us with a fact, let us hear it.

CHARACTER 1

Okay.

(A beat)

Lets talk about our sub-species first. Our lost brothers.

CHARACTER 4

What is sub-species?

CHARACTER 1

Sub-species are members of the same family like take for example

(A Beat)

Cat family. There are lions, tigers, cheetahs, wild cats, home cats etc. When you compare them they come in different sizes, shapes, colours. Some are strong meant to rule the jungle, some others are meant to be lazy and petted.

A picture projects on the screen revealing the cat family from strongest to the tamest.

CHARACTER 4

So.... What is that got to do with the evolution of humans?

CHARACTER 1

Like them we had lineage of sub-species too. We had almost from 5 to 10 different people who looked like humans but are not scientifically homo sapiens.

CHARACTER 4

Hold on right there. I know you are trying to sound smart but let me ask you first, what is homo-sapiens?

CHARACTER 3

You are a homo-sapien, have a respect atleast for being one.

Character 2 speaks through his cap over his face.

CHARACTER 2

Sounds like horseshit to me.

CHARACTER 3

No, no I have read it in a book.  
Something about finding bones and  
existence of different sets of DNA.

CHARACTER 1

Yup there were more than 6 species  
of them. They were named like homo  
neandrathalis, homo soloensis, homo  
floresiensis, homo denisova and we  
are homo sapiens.

Pictures projecting human families.

CHARACTER 4

You forgot about homo erectus.

Character 3 looks at Character 4 peculiarly to which he  
smiles.

CHARACTER 1

So imagine if these sub species  
survived along with us what would  
have happened in today's time. Like  
religion, caste, race and  
nationality, we would have had sub-  
species section that needed to be  
filled in our application forms.

CHARACTER 3

You know, that is interesting and  
really curious to know if they did  
existed today.

Character 2 wakes from his slumber.

CHARACTER 2

You know how they would have felt,  
they would be hungry just like me  
right now. I am heading out to eat,  
anyone else need something.

CHARACTER 1

I am good Character 2 thank you.

CHARACTER 3

Me too. I don't want to eat now.

CHARACTER 4

Well actually I would like to have  
some....

CHARACTER 2  
(interrupting)  
Alright I am gonna head out now.

Character 2 exits the scene.

CHARACTER 4  
He didn't even hear me complete my sentence.

CHARACTER 3  
Okay you told about other species that lived along with us and I agree with that. The question is what happened to them?

CHARACTER 1  
Nobody really knows the right answer. We just have some theories. The theory is that we killed them until they faced extinction.

CHARACTER 4  
Comon that is not possible. How can we kill an entire population of people without any explanation.

CHARACTER 3  
I don't think killing took just one day, maybe over several centuries.

CHARACTER 1  
Yup. And the reason for killing is simple. Superiority. Everyone wants to be at the top, so eventually everyone started killing much like what's going on today. You know they fight in the name of religion, border dispute or even for stupid little things like someone throwing a piece of paper into your property which starts dispute between you and your neighbors.

Projection of some wars and fights in a snippet.

CHARACTER 3  
I am thinking that makes up for a beautiful information. I will add that in.

Character 3 picks a sticky note and writes down just the heading of the topic. "Humans and there sub-species".

CHARACTER 1

Okay we have started off good.  
Anyone wants add in there ideas?

CHARACTER 4

How about this, all humans  
originated from Africa and Asia.  
You know America and Australia was  
an empty land for a very long  
period.

CHARACTER 3

Well someone is right in a long  
time.

CHARACTER 1

Yes that adds to the great  
narrative. We indeed came from  
Africa and after several centuries  
we moved in and around other  
continents.

CHARACTER 3

That's how we started our nomadic  
journey and sailing. We kept on  
travelling on foot until we reached  
Asia, then America and finally to  
Australia.

An old sailing clip of celebration.

CHARACTER 4

To go to Australia you needed boats  
and skills to withstand sickness  
being out on sea. It is said that  
the first group of early people to  
journey from Africa to Australia  
was as important as Columbus  
discovering America or Neil  
Armstrong setting foot on the moon.  
Until then Australia was a deserted  
land.

CHARACTER 1

Did they not get bored travelling  
for so long. I mean travelling from  
Africa to Australia in a broken  
medieval boat takes too fucking  
long and tiring.

CHARACTER 3

I don't know about that. Back then  
people travelled for entertainment  
and to survive.

(MORE)

## CHARACTER 3 (CONT'D)

They didn't had any gadgets or T.V., clubs or malls for entertainment purpose so only thing left was discovering new places.

## CHARACTER 1

That's true but one bad thing happened after discovering Australia, The animals started to vanish, more and more trees were cut down. Australia had totally different eco system back then. They had their own unique animals, vegetation which all went to extinction within few 1000's of years of human arrival.

Australia's unique wild life shown.

## CHARACTER 3

I mean that's how we paid for having big brain and we are still killing it even after realization.

## CHARACTER 4

You mean that whatever we see in Australia is not of that country's origins?

## CHARACTER 3

Yes even the people there. They are immigrants from different countries. Natives of Australia were killed entirely in a genocide or used as slaves who died of torture or disease. This was back when slavery was legal. The last known native Australian name was... I don't remember. She was a woman...Truga Something.

Just then Character 2 enters the scene.

## CHARACTER 2 (OVER)

Truganini.

A picture of a Tasmanian native.

## CHARACTER 2 (CONT'D)

And she is not Australian she is Tasmanian.

CHARACTER 1

Well someone wants to join in our hopeless project.

CHARACTER 2

I am not joining in, I just wanted to get back at Character 3 for calling me useless.

CHARACTER 3

I didn't call you useless I said that you were good for nothing.

CHARACTER 4

Wait before we proceed what is Tasmanian?

CHARACTER 1

Are you serious now? You know the origins the birth place of human beings and you don't know where is Tasmania?

CHARACTER 4

No I heard of Tasmania word in some cartoon show like Tasmanian devil.

CHARACTER 2

Tasmania is a small island south of Australia. They also went through slavery shit because of European invasion.

CHARACTER 1

Okay Character 2 as you have joined the game, do you want to give some important information, you know to get back at Character 3.

CHARACTER 2

While I sit here waste my time I don't mind giving out something. Let me think.

(Double beat)

Oh yeah. Do you know about various evolutions that shaped the future humans?

CHARACTER 3

Ya some I know.

CHARACTER 2

Yes bet you don't know everything.

Character 3 smiles at the corner of the camera.

CHARACTER 2 (CONT'D)

We have Cognitive revolution which happened around 70 thousand years ago. This is basic where humans learned to communicate, discover fire, building tools, painting and imagining things. Those basic shit. Then comes the Agricultural revolution which came around 12 thousand years ago. I do say where humans started to settle down, no more nomadic lifestyle. Growing and manipulating plants and animals to be harvested and consumed. Then scientific revolution 500 years ago where people started conquering other parts of the world like King and ruling type of shit. Then finally the Industrial revolution that we are living now where we totally ignored agricultural benefits and come to the cities bend down and work in front of computers. One good thing about this revolution is that there is totally no war, not totally but atleast not world wide threat.

Clips of various revolutions and backstories.

CHARACTER 4

Yup its infact too quite. We live right now where we have totally lost the purpose to live for.

CHARACTER 1

Nice job, we will add that in the new presentation.

CHARACTER 2

You are welcome.

Character 4 sits back down way back on that couch.

CHARACTER 1

Okay I think we are cooking good. Let's keep this discussion going. Now Character 3, your turn.

CHARACTER 3

Okay....

(A beat)

(MORE)

## CHARACTER 3 (CONT'D)

How about we talk about what everyone is interested in. Money.

Coins falling over top of eachother creating a distinct noise.

## CHARACTER 1

Okay lets hear it out.

## CHARACTER 3

Now a days money is issued in forms of coins and notes. Back then, you might know this, back then they used to exchange item for and an item.

## CHARACTER 2

Item for an item?

## CHARACTER 4

Ya sort of like it is same like money play but they are exchanging goods with eachother. Like apple for an orange or cloths for a bag of wheat.

## CHARACTER 3

It was like people used to decide the value of the product on spot. If you polish and repair my shoes for your service I would give you 10 bags of apples. Every hour the value of the product used to change. Like immediately for next customer if he gets his shoes fixed he would be getting some free medical service for extended period of time.

## CHARACTER 1

So its not only fixed to physical product.

## CHARACTER 3

Yes. You can get anything in return, be it some food for the night or services like fixing your house or repairing your broken chair, anything that you needed that time and people soon stopped such type of trading because it was confusing and not efficient.

(MORE)

## CHARACTER 3 (CONT'D)

Like literally some people gave up bars of gold for fixing someone's drainage system.

## CHARACTER 1

So people really didn't care that they had gold.

## CHARACTER 3

No, it worked like this. Maybe Gold was not important in my country but we have plenty of them and what we really need are some spices. So these traders come to us by boats or ship buy the gold exchanging with spices that they bought it from another country where the gold rate is high. They pick our gold and sell it in those needed countries making immense profit. You can see how inefficient and people being cheated here.

## CHARACTER 2

That's when they invented coins?

## CHARACTER 3

Yes and the first coin was issued in 7th B.C. It was from the place Lydia I believe. They immediately started minting coins and the king announced to his subject that they can trust these metal pieces because it had got his signature embedded on it and can exchange it for their required products or services.

## CHARACTER 2

And we are still following that sort of trading even today.

Old coin and new coin projected.

## CHARACTER 3

Yes we are but with little bit of change. We are not using physical form of coins anymore. We are using digital currency. Around the world if we add up the total value of money it sums up to 60 trillion but when we count the coins and notes it only adds up to 6 trillion.

CHARACTER 1

So you are saying maybe in future bitcoins and other sort of crypto currencies will be trademark for exchanging goods?

CHARACTER 3

Not sure, but there is possibilities.

CHARACTER 4

Not sooner though because most countries are not allowing crypto coins used as real money.

CHARACTER 3

We will get there, don't worry.

Character 3 keeps updating his log from time to time. Character 2 comes and peers in his log book.

CHARACTER 2

Are we getting anywhere?

CHARACTER 3

Yup. We are progressing and I must say if we keep going at this pace we can make some unique style of presentation.

CHARACTER 2

That's okay but can we make it in two days?

CHARACTER 3

Sure if we could spend some more time thinking and pulling out key points, we definitely can make it.

Character 2 looks at his wrist watch.

CHARACTER 2

Maybe we do have time. Lets make use of it perfectly.

Now Character 2 is completely invested in and pulls a stool and sits near the group.

CHARACTER 1

Okay until now we talked about origins of human being, our sub-species, money, revolution, maybe how about we talk about some religion.

CHARACTER 4  
Dude come on!!!

CHARACTER 2  
Why, what happened?

CHARACTER 4  
It is boring!!! How about we skip religion and discuss something else.

CHARACTER 3  
Boy you don't like to talk about religion don't you?

CHARACTER 4  
Politics and religion is the one thing that I stay the fuck away from.

CHARACTER 1  
Don't worry, it will be interesting to talk about how it came into origin.

CHARACTER 4  
Whatever man, just go ahead and explain.

CHARACTER 1  
Now this religion is a tricky thing. We don't know when people started thinking of existence of higher power. So data states almost 30 thousand years ago a statue was built.

CHARACTER 3  
What statue?

CHARACTER 1  
It was statue consisting head of a lion and the body of a human. It was found in one of the German caves. Does this ring any bell?

CHARACTER 2  
Why should any bell ring?

CHARACTER 1  
You know head of a lion and body of a human. You know you must have seen it somewhere.

CHARACTER 4

Dude you just mentioned it, the cave in Germany.

CHARACTER 1

No, other than caves have you seen it elsewhere or seen it as some sort of symbol on a car?

CHARACTER 3

Wait are you talking about the Peugeot logo?

CHARACTER 1

Yes finally, thank you.

CHARACTER 2

What does that got to do with the religion?

CHARACTER 1

Yes, during that period when they built the statue Humans imagination started to kick in. They begin to draw various vivid paintings on cave walls and carving sculptures of something that really didn't exist. They even started worshipping this statues as back as 30,000 years ago. Which means they believed in some sort of power way back then.

CHARACTER 2

But did they call him God?

CHARACTER 1

The term God was not used to describe their prayers. They used animals, plants or ghosts as sort of belief. This is called Animism.

CHARACTER 4

So they prayed to some wild animals?

CHARACTER 1

Yes, but not all took particular interest to a same animal or a tree. Like for example some country believed in sheep and forbidden it from hunting.

(MORE)

## CHARACTER 1 (CONT'D)

While other part of regions  
believed in a Banyan tree and  
forbidden it from being cut down.

## CHARACTER 3

I think we still worship the Banyan  
tree in India.

## CHARACTER 1

Yes I did not say Animism stopped  
existing, Hindus still worship Cows  
and Banyan trees even to this day  
but you don't see in many  
countries.

## CHARACTER 4

Okay what about Hindus,  
Christianity or Islamic religion?  
When did they come?

## CHARACTER 1

Not yet. After Animism then came  
Polytheism. Which means multi God.

## CHARACTER 4

Okay this is the part where God  
came into existence in people's  
mind.

## CHARACTER 1

Yes in Polytheistic religion some  
people believed in the existence of  
Zeus, Hera, Apollo and others went  
with Ganesha, Lakshmi and  
Saraswathi. The next step in  
religion was Monotheism.

## CHARACTER 3

This must be where people started  
classifying themselves as the now  
modern religions.

## CHARACTER 1

Yes each group believed that their  
God is the universal God.

## CHARACTER 2

That's what Mono means, single.

## CHARACTER 1

If others makes fun or disobeys the  
laws of their particular religion  
they would punish them.

CHARACTER 4

And thus began a religious war.

CHARACTER 1

Then came Dualism.

CHARACTER 4

Wait there is more?

CHARACTER 3

Yea, its crazy how many religions people have discovered throughout centuries.

CHARACTER 1

Dualism basically aims for good and bad, pure and evil, God and Satan. They believe in opposite forces.

CHARACTER 2

If there is something good going on in the world, somewhere in the corner evil being is existing.

CHARACTER 1

Yes but I don't know what are the names of religions used under Dualism.

CHARACTER 2

Zoroastrianism. They saw the world as battle between good god Ahura Mazda and the evil god Angra Mainyu.

CHARACTER 4

Dude do you study or follow Religion? If you do for the love of God don't preach me.

CHARACTER 2

I don't preach, I just came upon the subject of Dualistic religion from a book. Thought I felt it was interesting to read for general facts.

CHARACTER 1

You guys definitely know about Buddhism right?

CHARACTER 3

Yes, their idol worshipping figure is rather a human being than a god.

CHARACTER 4

It's Gauthama Buddha right? I have seen a cartoon story revolving around how he walked out of his palace to seek something or end suffering.

CHARACTER 2

You still watch cartoon networks?

CHARACTER 4

Yea this is a spiritual one. Everyone should watch this. I don't watch cartoons like other kids watch.

(A beat)

Except tom and jerry, chotta beam, you know shinchan and doraemon. Ohh I found new taste in animes now. I love all there series like Berserk which is definitely not for kids.

CHARACTER 1

Okay lets talk about human evolution for today and don't divert somewhere. So as Character 4 said Siddhartha Gauthama went on journey, guru after guru trying to seek justice for sufferings. Finally he came upon conclusion that you cannot end your sufferings but only can control it. In simple words stop craving for more.

CHARACTER 3

That's what Buddhist preachers teaches to their people but in reality it is very hard.

CHARACTER 4

Okay is this presentation trying to make students convert their religion. Stop adding more preaching stuff and let's move one.

CHARACTER 1

You are right it was getting lengthier there. Let's move to next religion.

CHARACTER 4

There is still more???

CHARACTER 1

This is the last one. This religion believes in more of an ideology. Some examples are Communism, Capitalism, Nationalism and Nazism.

CHARACTER 2

Dude Nazi is a religion?

CHARACTER 1

Yes, they believed that they were serving what was right and following orders of God and there God was Hitler. Modern religions they certainly believe in a particular person who kind of started it.

CHARACTER 3

Let's finish the religion topic with Atheism- People who do not believe in existence of GOD.

CHARACTER 1

Okay how about we finalize the project here.

CHARACTER 2

What that's it? We came this far why don't we also add a little bit more.

CHARACTER 1

I don't know anything more but if you do, your welcome to pitch in.

CHARACTER 2

I was thinking of adding, you know kind of future of something. Like what will be the fate of humans?

CHARACTER 3

What will be the fate? I think we cannot predict that.

CHARACTER 2

Yes but we can guess atleast from the current ongoing situation.

CHARACTER 4

Give us something to work on.

CHARACTER 2

Okay how about the fact that the period that took from discovering fire and inventing a bulb which is permanent light was so many centuries. But if you consider inventions, any invention be it landline to handheld cellphone or gramophone to LED T.V. and you can even consider this, simple calculator to artificial intelligence it just took max to max a century gap.

CHARACTER 1

That is true. People are discovering or inventing new things everyday.

CHARACTER 4

You said artificial intelligence right? Are humans going to be replaced by robots in future.

CHARACTER 3

Where did you get that theory from, let me guess movies?

CHARACTER 4

Yes and they are not imagining things. They must have studied so many materials before coming to that conclusion. Making movie is not a child's play. You need to convince people what they are seeing and only possible way is presenting them with facts.

CHARACTER 3

That was the only longest logical statement that I have ever heard from you.

CHARACTER 2

There is some truth to that. First there were single celled organisms which developed into four legged beast and finally into a thinking animal. Now we are progressing with binary digits.

CHARACTER 1

If you see the progression until now, everything was evolving naturally. You know plants and animals are not invented by humans. They went through biological changes throughout millions of years. But now maybe the future beings which might dominate Earth might be created by intelligent beings.

CHARACTER 2

Do we go extinct in future.

CHARACTER 1

Maybe not soon seeing the current population. Who knows nothing is permanent. Elon Musk might transport rich people to mars and slowly he will empty the Earth. Finally only things left back at our original home would be destroyed planet with A.I's ruling the world.

CHARACTER 2

That's a bit of a stretch.

CHARACTER 1

As I said this is just one of the theory.

CHARACTER 3

You know what, it's not just artificial things we are going to see in future. There are various other outcomes.

CHARACTER 1

Like what?

CHARACTER 3

One is the genetic manipulation. People are already studying how to alter genes inorder to reverse aging, extending life, cure diseases.

CHARACTER 4

Hold on. Why do you want to extend life? Why you want to live on forever?

CHARACTER 3

Don't know. People are scared to die. I mean they have already done some pretty weird shit like genetically mutating a rat's and human's genes so that when a rat grows up it also develops complete human ears on its back. So whenever there is a surgical procedure or in need of ears they can tear it from the rat and use it has a fully functioning human ear.

CHARACTER 2

I believe Liger and other cross-breeding animal came the same way.

CHARACTER 3

Yes and Manipulating genes is not something people discovered recently. They have been doing it 10000 years before. They would take a fat hen and a lazy cock and breed it to give a fat and lazy offsprings. Who knows what the future does. Maybe bring back extinct animals like mammoths or dinosaurs or even our old brothers and sisters.

CHARACTER 4

You mean someone's dead relative?

CHARACTER 3

No idiot, I was talking about Neanderthals. The extinct humans.

CHARACTER 4

What is Neanderthals now?

CHARACTER 3

Are you serious? We discussed in the beginning.

CHARACTER 4

Oh the erectus part, gotch you.

CHARACTER 1

Well that was something I learned new today.

CHARACTER 3

I am not yet finished. Then we have cyborg engineering.

(MORE)

## CHARACTER 3 (CONT'D)

Mixing of organic and inorganic parts. Like for example if a person is disabled, missing a hand or a leg they can replace it with a mechanical part.

## CHARACTER 2

Okay, thats interesting.

## CHARACTER 3

There is a man named Jesse Sullivan an electrician and Claudia Mitchell a soldier who lost their arms in an accident. Now they have this bionic arm which is completely mechanical and almost replicates what an actual human arm does. But thats not the craziest part. They are operated through the users brain.

## CHARACTER 1

You mean they are controlled through thoughts?

## CHARACTER 3

Yes. If you think of lifting your arm or catching something these bionic arms receives the message through neurons and converts it into binary codes and then into mechanical.

## CHARACTER 2

Wow. Thats a lot of research, time and work to build that.

## CHARACTER 3

They did it finally and people can use it now. And ofcourse we finally have the inorganic beings that are A.I's Or robots which are also the man-made creation.

## CHARACTER 1

I think that would be a great way to end the presentation. Nice work everybody.

All of them stretch and relax.

## CHARACTER 2

So what do you think?

CHARACTER 1

About what?

CHARACTER 2

Using this has our final project work

CHARACTER 1

You are okay with this?

CHARACTER 2

I mean I need to study some notes to understand the project but that's okay I will do it.

(turning towards Character 3)

This time I will format the presentation.

CHARACTER 3

What? Don't worry I will do that. You just practice for your speech.

CHARACTER 2

Comon man give me a chance I want to repent my past mistakes. I will work hard and give a 100% effort.

CHARACTER 4

I will help him too. Don't worry, we won't disappoint you.

CHARACTER 3

But....

CHARACTER 1

(interrupting)

I think they are motivated enough. Let's give them a chance, I know they will do it.

CHARACTER 2

See, we still have two days to prepare so relax man. You go home and chill we will handle this.

CHARACTER 3

Hope you will finish the work by today.

CHARACTER 4

Today? Not today. We start tomorrow.

CHARACTER 1  
What will you do today then?

CHARACTER 4  
There is a new movie coming out. I think me and Character 2 will head out after leaving from here.

CHARACTER 2  
Oh yaa I totally forgot about the movie in this discussion. So do you guys want to join?

CHARACTER 1  
What about the work?

CHARACTER 2  
Don't worry, tomorrow as soon as we get up we will start.

CHARACTER 1  
Okay. We are trusting you on this.

CHARACTER 3  
What time you regularly get up Character 2?

CHARACTER 2  
Duh, 2 or 3 pm. What's new in that?

Character 2 and Character 4 drift in the background talking about the movie they were going to watch. Character 1 slowly move towards Character 3.

CHARACTER 1  
I think you should prepare the presentation.

CHARACTER 3  
I think I should too.

CHARACTER 1  
Okay.  
(to everyone)  
Okay that's a wrap up.

CUT TO BLACK.

END
